

Chronis Innovation Challenge 2026

Team Chronis

Direct Internship + 5,000 Reward Opportunity

At Chronis, we are building a next-generation wearable AI system designed to become a real-time memory, intelligence, and context layer for human interactions.

As part of the development of Chronis, we continuously explore complex challenges at the intersection of AI, human memory, context intelligence, privacy, and wearable computing.

To identify exceptional thinkers, we are presenting one such challenge to prospective interns.

This is not a coding exercise. It is a first-principles innovation challenge designed to evaluate your ability to rethink fundamental assumptions and design breakthrough systems.

We are opening this challenge to all candidates.

The Problem

Chronis can capture information from the user wearing the device. However, a major challenge arises when another individual (a third party) is interacting with the user but is not wearing Chronis.

For Chronis to function effectively, it requires complete conversational and environmental context. Yet recording another person introduces significant privacy, consent, legal, and ethical concerns.

The Challenge

How can Chronis retain **complete interaction context** involving a third party while avoiding the traditional privacy issues associated with recording that person's voice and/or video?

Important Constraints

Your solution must satisfy all of the following:

1. The system must preserve context with near-complete fidelity.
2. Generic transcription, summarization, note-taking, or "capture only key insights" approaches are not acceptable.

3. Traditional anonymization techniques are not acceptable:
 - Voice pitch modification
 - Voice masking
 - Voice changers
 - Face blurring
 - Facial anonymization
 4. We are not looking for a legal workaround or a simple consent flow.
 5. The solution should be technically feasible or capable of becoming feasible within the next decade.
 6. The solution should be capable of operating at scale within the Chronis ecosystem.
 7. The solution should represent a genuine breakthrough rather than a minor variation of existing products.
-

What We Want

We are looking for candidates who can think beyond conventional AI, privacy, wearable technology, and data-capture frameworks.

Your submission should include:

1. **Core Idea**

“ A concise explanation of your proposed breakthrough.

2. **Technical Architecture**

Explain exactly how the system would work.

3. **Privacy Framework**

Explain why the approach avoids or minimizes the privacy concerns associated with recording a non-user.

4. **User Experience**

Describe what both the Chronis user and the third party would experience.

5. **Advantages**

Why is your approach superior to existing methods?

6. **Limitations & Risks**

Identify potential weaknesses and how they could be addressed.

7. **Scalability**

Explain how this could be deployed to millions of users.

8. **Competitive Defensibility**

Could this become proprietary technology or a defensible moat for Chronis? “

Evaluation Criteria

Submissions will be judged on:

- Originality
- Technical Depth
- Practical Feasibility
- Privacy Innovation
- Scalability
- Strategic Value to Chronis

We are not looking for ChatGPT-generated generic responses. We are looking for first-principles thinking and breakthrough-level reasoning.

Reward

Winner Receives:

- 5,000 Cash Prize
- Direct Internship Opportunity at Chronis
- Opportunity to work on one of the company's most important research problems

Submission Link

<https://forms.gle/CsErzMqm1H68e6FN9>

Deadline

Submission Deadline: 26 June 2026, 11:59 PM IST

Late submissions will not be considered.

Final Note

If you believe you can solve a problem that has challenged our own team, we want to see your thinking.

Good Luck!
Team Chronis
