

Chronis • Innovation Challenge • 2026

A problem that has challenged our own team.

First-principles thinking. Wearable AI. Privacy reimaged.

This is not a coding test — it is a design challenge for exceptional minds.

Rs. 5,000 Cash Prize

Direct Internship

Open to All

Deadline: 26 June 2026, 11:59 PM IST | [Submit Here](#) | [GitHub Repo](#)

What Is Chronis?

Chronis is a next-generation wearable AI locket designed to capture audio, video, motion, and biometric signals continuously and in real time. Acting as a persistent memory and intelligence layer, it processes everything on-device — understanding context, recognising patterns, and surfacing insights precisely when they matter.

We are at the frontier of human–AI interaction. And we need minds who can think at that frontier alongside us.

The Problem

The Third-Party Context Gap

Chronis captures rich context from the wearer. But when a third party — someone *not* wearing Chronis — enters the interaction, a fundamental gap appears.

For Chronis to function as a true intelligence layer, it needs **complete conversational and environmental context**. Yet recording another person introduces serious privacy, consent, legal, and ethical concerns that cannot simply be engineered away.

*“How can Chronis retain **complete interaction context** involving a third party — without recording that person?”*

Constraints — Every One Must Be Satisfied

Read carefully. Your solution must satisfy *all* of the following. Violating even one disqualifies the submission.

1. **Near-complete fidelity.** The system must preserve interaction context with near-complete

accuracy — not a summary or an approximation.

2. **No summarization shortcuts.** Generic transcription, note-taking, or “capture key insights” approaches are explicitly ruled out.
3. **No traditional anonymization.** The following are all disqualified:
 - × Voice pitch modification, voice masking, voice changers
 - × Face blurring or facial anonymization of any kind
4. **Not a legal or consent workaround.** A consent flow is not a solution. The architecture must be fundamentally sound.
5. **Technically feasible.** Achievable today or realistically within the next decade. No speculative physics.
6. **Scalable.** Must operate across the full Chronis ecosystem at millions-of-users scale.
7. **Genuinely novel.** A minor variation of an existing product will not be accepted.

Your Submission — 8 Required Sections

We want to see *how you think*, not just what you know. Structure your submission around these eight sections exactly:

Section		What we are looking for
I	Core Idea	State the breakthrough in 3–5 sentences. Lead with the insight. No preamble.
II	Technical Architecture	How does the system work end-to-end? Components, data flows, on-device vs. cloud, inference logic, edge cases.
III	Privacy Framework	Why does this approach avoid or minimise the concerns of recording a non-consenting third party? Be precise.
IV	User Experience	What do the Chronis wearer and the third party each experience? What do they control?
V	Advantages	Why is your approach superior to existing methods? Name and compare specific alternatives.
VI	Limitations & Risks	What are the honest weaknesses? Propose a 2–5 year roadmap to address them.
VII	Scalability	How does this deploy to 10 million users across languages, cultures, and device tiers?
VIII	Competitive Defensibility	Could this become a proprietary moat? What prevents a competitor from replicating it in 18 months?

How We Judge

Originality	Is this genuinely new, or a rearrangement of known techniques?
Technical Depth	Is the architecture specific and mechanically plausible?
Practical Feasibility	Can it be built with realistic effort and available hardware?
Privacy Innovation	Does it genuinely reframe the privacy challenge?
Scalability	Does it hold under large-scale, real-world conditions?
Strategic Value	Does it strengthen Chronis's long-term competitive position?

We will recognise AI-generated responses immediately. We are looking for first-principles reasoning that comes from sitting with the problem and thinking hard. If your answer could have been written for any company's product, it is not the answer we want.

The Reward

WINNER RECEIVES ALL THREE

Rs. 5,000

Cash prize awarded directly to the winner.

Direct Internship at Chronis

No further interviews. The winning submission is the interview.

Work on the Core Research Problem

From day one, you work on one of Chronis's most important open challenges.

One winner. Three things that genuinely matter for a career in frontier AI.

Deadline & Submission

Submission Deadline

26 June 2026, 11:59 PM IST

Late submissions will not be considered under any circumstances.

Submit your solution

*“If you believe you can solve a problem that has challenged
our own team, we want to see your thinking.”*

Good luck.
